DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-28 are allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious "a receive element characterized in that the receive element is sensitive to millimeter-wave radiation, the optical system is arranged to focus incident energy from a scene onto the receive element, and the device is adapted to measure the power of a received signal at different times and further adapted to include a beam steerer for redirecting an incoming direction of the incident energy to be able to make measurements from different parts of the scene, and provide an indication based on the measurements without using said measurements in the formation of an image of the scene," in combination with the rest of the limitations of the claim.

As to claim 22, the prior art of record, taken alone or in combination, fails to disclose or render obvious "receiving millimeter wave radiation from the scene using a scanning optical system, wherein: a first measurement is made of radiation from a first scanned part of the scene; a further measurement is made of radiation from a second

scanned part of the scene wherein the second part of the scene may overlap with the first part of the scene; and an indication is provided if characteristics of the first measurement are different to characteristics of the further measurement without using said measurements to form an image of the scene," in combination with the rest of the limitations of the claim.

As to claim 28, the prior art of record, taken alone or in combination, fails to disclose or render obvious "a receive element characterized in that the receive element is sensitive to millimeter-wave radiation, the optical system is arranged to focus incident energy from a scene onto the receive element, and the device is adapted to measure tile power of a received signal at different times and further adapted to include optics for changing the beamwidth of the antenna to allow measurements from different sized parts of the scene, and provide an indication based on the measurements, without using said measurements in the formation of an image of the scene," in combination with the rest of the limitations of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
